

Google Ads API Tool Design Documentation

Company Name: MusicalBasics Productions

Business Model:

MusicalBasics Productions operates several related businesses under one umbrella, all owned and managed by the company. These include:

- **MusicalBasics** (musicalbasics.com), a YouTube channel and creator business with approximately 1.2 million subscribers, selling sheet music, online courses, and concert tickets
- **DreamPlay Pianos** (dreamplaypianos.com), a hardware startup selling narrow-key digital pianos
- **Ultimate Pianist Masterclass**, an online course product sold through the MusicalBasics ecosystem
- Concert tour landing pages including belgium.musicalbasics.com

All of these Google Ads accounts are owned by MusicalBasics Productions. The company does not manage advertising for any third parties and does not offer this tool as a product or service to anyone else.

Tool Access and Use:

The tool will be used solely by the company owner to manage advertising across the company's own businesses. There are no external users with access to the tool. The tool runs on a private server (Hetzner VPS, accessed via Tailscale) and is not externally accessible. It produces daily summary reports delivered to internal notification channels (Slack or email) for review by the company owner.

Tool Design:

The tool consists of a Python application that interacts with the Google Ads API to:

- 1 Pull daily performance data (impressions, clicks, conversions, cost, conversion value) from the company's Google Ads accounts into a private Supabase database
- 2 Generate daily summary reports of campaign performance for internal review
- 3 Create and manage video and search campaigns programmatically based on parameters specified by the company owner
- 4 Enforce spend guardrails by pausing campaigns when daily budget thresholds are exceeded or when anomalies are detected
- 5 Sync conversion data from the company's Shopify store with Google Ads campaign performance for attribution analysis

The tool reads data from Google Ads on a scheduled basis (every 4 hours for current-day performance, daily for full historical sync) and writes mutations only when a change has been approved or when an automated guardrail rule triggers a pause action. All mutations are logged with full before-and-after state for audit purposes.

API Services Called:

- **CampaignService:** create and manage campaigns
- **CampaignBudgetService:** manage daily budgets and budget caps
- **AdGroupService:** create and manage ad groups
- **AdGroupAdService:** manage ads within ad groups
- **AdGroupCriterionService:** manage keywords, audiences, and negative keywords
- **GoogleAdsService:** pull performance reports using GAQL queries
- **ConversionActionService:** read conversion action configuration
- **CustomerService:** read account-level information

Tool Mockups:

The tool is not externally accessible and has no user interface beyond text-based daily summary reports delivered to internal notification channels. A sample daily summary report is shown below:

BELGIUM CONCERT ADS: 2026-05-20
Days until concert: 22
Seats remaining: 47

YESTERDAY:

Spend:	EUR 28.40 (95% of daily budget)
Impressions:	4,210
Views:	892
Clicks:	38
Conversions:	2 (1 standard, 1 VIP)
Revenue:	EUR 88.00

TO DATE:

Total spend:	EUR 184.20 of EUR 600.00 (31%)
Total conversions:	14
Total ad-attributed revenue:	EUR 486.00
ROAS:	2.64x
CPA:	EUR 13.16

STATUS: Running
ALERTS: None

Top performing audience: MusicalBasics subscribers (Belgium)

The tool also produces structured logs in a private database that are queried directly for deeper analysis when needed.
